Project Description:

The project included a district-wide cable solution upgrade for seven elementary schools, a complete renovation of the middle school, and an expansion of the high school. MOSS did all the design and building of the cabling solution under the IBM name. The project required cabling in nine schools simultaneously. The renovation and new construction also led to tough scheduling with other trades and vendors.

Product Solution:

- Cabling: NordX Cat5E with 20-year warranty
- Switches: Cisco (IBM supplied)
- Projector: Epson and DVD/VCR: Panasonic (all audio and visual tied into the teacher's workstations (IBM) in individual classrooms)

Unique Conditions:

Year-round work done after hours when school was in session.

Results/Benefits:

- Very stable cabling solution that can handle the requirements of today and future upgrades
- Detailed documentation package that allows local staff to plan and complete all Moves, Adds and Changes

Making technology work for business.
