Project Description:

Select Bank planned to move into a remodeled bank building, featuring such historic architectural details as marble floors and walls, in downtown Grand Rapids. MOSS coordinated all of the cabling for the new location, where less-than-adequate cable paths posed installation challenges. They worked with other vendors and wired the new space for all of their technology, including phones, network, security, and ATM. In addition, since MOSS has much experience with networks and telephone systems, they helped lay out the main equipment room and made recommendations to the various vendors. This way, Select Bank had a well-organized and manageable system. MOSS also provided audio and video conferencing equipment for the board room by modifying a cabinet that was purchased by the bank and custom-fitting a state-of-the-art system added to their existing equipment.

Product Solution:

- Voice and data cabling to a main frame and one intermediate frame
- Security cabling to doors and cameras
- Video conferencing incorporating existing equipment
- Fiber-optic cable to intermediate frame
- Project coordination with other trades

Unique Conditions:

MOSS had to work around historic architectural details, such as marble walls, high ceilings and lack of useable cable conduit.

Results/Benefits:

Select Bank saved money by not needing to hire several suppliers to run their cables separately, and still had a much more organized and coordinated computer room. As-built documentation has allowed them to move and change their phones and computers themselves, saving additional costs by eliminating service calls.

Making technology work for business.
