## Project Description:

MOSS designed and installed an innovative structured cabling solution in the midst of a manufacturing facility remodel. By working carefully with the customer, MOSS was able to coordinate with other trades during construction and provide an efficient installation.

## Product Solution:

- Voice/data cabling
- Fiber and copper feed cases
- MDF + IDF build-outs
- Sound system
- Video cabling for video messaging

## Unique Conditions:

- Overall size of building – 30' ceiling height
- Work had to be done with lifts while floor was cluttered with manufacturing equipment
- Needed to install zone paging

## Results/Benefits:

Interface has been a MOSS customer for 10 years. This installation will have a long life span and is flexible enough for future corporate growth.

Making technology work for business.
