### Project Description:

Over the course of two years, MOSS deployed a structured cabling solution for a new construction project at Stryker's Corporate Headquarters in Kalamazoo, MI. The design/build solution included a Board room and training rooms featuring state-of-the-art presentation technology.

### Product Solution:

- Systemax cabling for station outlet (fiber and copper network backbone)
- Crestron and various multi-media products for board and training rooms

### Unique Conditions:

For part of the cabling project, MOSS had to work in a fully operational manufacturing facility. This meant working above and around operating machinery.

### Results/Benefits:

As a global company, Stryker has a flexible cabling solution that can respond to anticipated and unanticipated growth. They also have handsome, high-functioning Board and training rooms.

Making technology work for business.
